

# UNIT6-DAY8-LaB1230pm

Monday, March 04, 2013

7:34 PM

## Thinking Like a Chemist About Equilibrium & Acids and Bases UNIT6 DAY8 RAQ

CH302 Vanden Bout/LaBrake Spring 2012

What are we going to learn today?

REVIEW  
Equilibrium  
Behavior of Acids/Bases:  
Aqueous Solutions  
Neutralization Reactions

CH302 Vanden Bout/LaBrake Spring 2012

## IMPORTANT INFORMATION

Class announcement about exam procedures

-Students MUST take correct exam (professor AND time)

-No bags, no graphing calculators, no extra calculators provided

-Write name 3 places on exam (MC, FR and signature on scantron)

-Students must be prepared to turn the exam in when they get in line: scratch pages stuffed into MC, photo ID out

-For a quieter exam, bring earplugs (not earphones)

*Ham*  
*12:30*

CH302 Vanden Bout/LaBrake Spring 2012

## IMPORTANT INFORMATION

### UNIT 6 EXAM WEDNESDAY EVENING 7PM-9PM

**Dr. VandenBout 9:30AM (51540)**

**WEL 1.316 version # 1- 160**

**BEL 328 version # 161-330**

**WEL 2.246 version# 331+**

**Dr. LaBrake 11 AM (51535)**

**WCH 1.120 version # 1-175**

**PAI 3.02 version # 176-325**

**MEZ 1.306 version # 326+**

**Dr. LaBrake 12:30 PM (51525)**

**JGB 2.324 version # 1- 175**

**WEL 2.122 version # 176+**

CH302 Vanden Bout/LaBrake Spring 2012

POLL: CLICKER QUESTION 1

Thinking about the UNIT 6 EXAM material, I have a good sense of what I understand and don't understand.

- A) Not True of Me AT ALL
- B) Somewhat Not True
- C) I'm not sure how I would know if I'm ready for the Exam
- D) Moderately True of Me
- E) Very True of Me

CH302 Vanden Bout/LaBrake Spring 2012

QUIZ: CLICKER QUESTION 2

Polyprotic Acid

$K_{a1} = 7.4 \times 10^{-4}$

$K_{a2} = 1.7 \times 10^{-5}$

$K_{a3} = 4.0 \times 10^{-7}$

pKa  
~4  
~5  
~7

At pH = 10 will the acid be fully protonated or fully deprotonated?

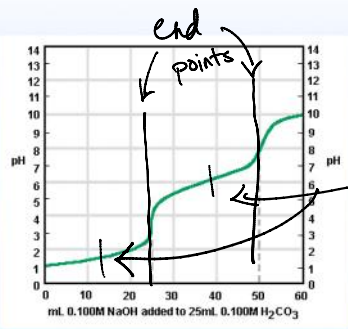

- a) Protonated
- b) Deprotonated
- c) Can't tell

CH302 Vanden Bout/LaBrake Spring 2012

### Titration of a polyprotic

titrant NaOH  
analyte: diprotic acid

1/2 end pt  
(1/2 equivalent)  
pH = pKa

Two equivalence points  
Diprotic H<sub>2</sub>A

Principles of Chemistry II

© Vanden Bout

CH302 Vanden Bout/LaBrake Spring 2012

Phenolphthalein: weak acid  $K_a < 1$

$K_a < 1$   
 $10^{-4} < 1$   
 $\Delta G^\circ = -RT \ln K$   
 $\Delta G^\circ > 0$   
nonspontaneous  
... But it does happen!  
→ reactant favored  
stress by adding OH<sup>-</sup>  
Add OH<sup>-</sup>  
H<sub>3</sub>O<sup>+</sup> goes down  
Shift to products

Explain to a neighbor how, if this is a non-spontaneous change, the indicator ever changes color. Be prepared to share your answer with the rest of your sector.

CH302 Vanden Bout/LaBrake Spring 2012

What happens to a system at equilibrium when you change the environment?

TEST

CH302 Vanden Bout/LaBrake Spring 2012

### Chemical Equilibrium pH indicator Bromothymol Blue, $\text{pK}_a = 7.1$

Protonated form  
yellow

Deprotonated form  
blue

CH302 Vanden Bout/LaBrake Spring 2013

What is happening to the egg in the acid?

??

protein  
in egg  
amino acids

cooks egg  
chemical burn

lots of OH<sup>-</sup>  
pH > pKa  
=  
pKa pKa  
lots H<sub>3</sub>O<sup>+</sup>

CH302 Vanden Bout/LaBrake Spring 2012

Egg = proteins + water

~~✗~~ We are changing the structure of the proteins ~~✗~~

Why? They are all protonating

↳ denatured

If the pH < pKa

an acid/base will be protonated

CH302 Vanden Bout/LaBrake Spring 2012

Proteins = poly-peptides =  
covalently linked amino acids

Group	Acid $\rightleftharpoons$ Base + H <sup>+</sup>	pKa
Terminal carboxyl	<chem>RC(=O)OH &lt;=&gt; RC(=O)[O-] + H+</chem>	3.1
Aspartic acid or glutamic acid	<chem>RC(=O)OH &lt;=&gt; RC(=O)[O-] + H+</chem>	4.4
Histidine	<chem>C1=CN=C[NH+]1 &lt;=&gt; C1=CN=C[NH+]1 + H+</chem>	6.5
Terminal amino	<chem>[NH3+]R &lt;=&gt; NR2 + H+</chem>	8.0
Cysteine	<chem>RS-H &lt;=&gt; RS- + H+</chem>	8.5
Tyrosine	<chem>c1ccc(O)cc1 &lt;=&gt; c1ccc([O-])cc1 + H+</chem>	10.0
Lysine	<chem>[NH3+]R &lt;=&gt; NR2 + H+</chem>	10.0
Arginine	<chem>[NH3+]C(=N)N &lt;=&gt; [NH3+]C(=N)N + H+</chem>	12.0

pKa

Which are protonated at pH = 0?

**All of them**

(plus some more compounds that don't make the chart)

We have buffers  
in our bodies!

CH302 Vanden Bout/LaBrake Spring 2012

## Play a "Know your solution" game

Work with a couple of neighbors.  
Clicker questions will come periodically.  
Someone will explain what is going on!  
If you know this cold, you are in really GREAT shape for the exam.

CH302 Vanden Bout/LaBrake Spring 2012

POLL: CLICKER QUESTION 3

The pH of 1.0 M Aniline is:

- A) 11.3
- B) 9.3
- C) 7.3
- D) 4.7
- E) 2.7

CH302 Vanden Bout/LaBrake Spring 2012

POLL: CLICKER QUESTION 4

The pH of 0.25 M Anilinium chloride is:

- A) 11.4
- B) 9.4
- C) 7.4
- D) 4.6
- E) 2.6

CH302 Vanden Bout/LaBrake Spring 2012

POLL: CLICKER QUESTION 4

The pH of a solution with .1 M Aniline and 0.25 M Anilinium chloride is:

- A) 11.4
- B) 9.6
- C) 7.6
- D) 4.2
- E) 2.4

CH302 Vanden Bout/LaBrake Spring 2012

POLL: CLICKER QUESTION 5

The pH of a solution with 0.5 moles of HCl added to 1 Liter of 1 M Aniline is:

- A) 11.6
- B) 9.6
- C) 7.6
- D) 4.6
- E) 2.6

CH302 Vanden Bout/LaBrake Spring 2012

POLL: CLICKER QUESTION 6

The pH of a solution with 0.01 moles of HCl added to 1 Liter of .1 M Aniline and 0.25 M Anilinium chloride is::

- A) 11.1
- B) 9.9
- C) 7.1
- D) 4.1
- E) 2.1

CH302 Vanden Bout/LaBrake Spring 2012

### Interpreting K and $\Delta_r G^\circ$

$\Delta_r G$ , difference in molar free energy of products and reactants at *any* definite fixed composition of reactants and products

CH302 Vanden Bout/LaBrake Spring 2012

What did we learn today?

#### REVIEW for EXAM

- Chemical Equilibria – Concepts
- Acid – Base Chemistry
- Determine pH of various solutions
- Indicators
- pH Curves

CH302 Vanden Bout/LaBrake Spring 2012
